How To Sail Around The World : Advice And Ideas For Voyaging Under Sail

Synopsis

A new classic from one of the world's most respected sailing authors More than 35 years ago, Hal Roth quit his job as a journalist and went sailing. Since then, he's logged more than 200,000 sea miles. Along the way, Roth also has authored eight voyaging classics, including the 1978 bestseller *After 50,000 Miles*. Taking that book as its starting point, this handsome new volume incorporates the new technologies and discoveries of the last quarter century along with another 150,000 miles of experience. A compendium of mature, time-tested sea wisdom from one of the world's most respected sailing writers, *How to Sail Around the World* will tell the reader: How to choose and equip a sailboat for long-distance cruising, with an emphasis on simplicity and a modest budget How to plan and conduct a voyage anywhere in the world How to master the arts of navigation, anchoring, and daily life aboard in exotic places How to cope with storms at sea--the most complete and authoritative treatise on this critical topic ever published

Customer Reviews

I stayed up late to finish this book, and regret the publisher has not seen fit to offer readers a "Look Inside the Book." I am adding this book to my list of great sailing manuals, handbooks, and other guides, with the observation that this book is in no way a substitute for those more detail oriented step by step books BUT this book is also unique. It is PACKED with real-world experience and clever sense--much beyond common sense--that is literally priceless. Put clearly, I would not leave this book out of my calculations in planning to acquire and manage an offshore journey that includes an ocean crossing. Chapter 15 on "Can You Be Seen At Night" is alone worth the price of the book. I

have NEVER seen this much useful detail anywhere else, including the so-called everything guides. The author excels at providing contact information and specific recommendations and I absolutely would not go to sea in the future without buying the masthead light he recommends in the book. I also realized that the 65 MacGregor, which I have my eye on, falls just within the 65.6' limits of international regulations on masthead lights sufficing (when sailing), and personally think MacGregor is making a mistake in thinking about a 70' version. This book has FOUR chapters on storm management, and I have NEVER seen it explained more sensibly, in logical progression. I am not a lifelong sailed despite a provisional D Skipper rating (less celestial), so these four chapters are for me the equivalent of a life-time tutorial that I badly need. While speaking of celestial, this book persuaded me I have to get on with that qualification.
