Customer Reviews

Complete and utter waste of money if you are using this for homeschooling or any setting outside a class that requires this "Mastering Biology". None of the tools in the eText are interactive, despite it being listed in the Campbell Biology book as interactive (you have to be assigned a study question for it to be actually interactive). The additional study areas are also not very useful so all you really get with this is an electronic version of the textbook, and you don't even get that unless you are actually online. It is not a PDF copy of the book, not that I wanted or expected that feature. In summary, rather useless for anyone outside a university setting.

They used the wrong picture for the access code picture so I thought I was buying the right edition which I wasn't. The product is fine but it was an expensive mistake. which is resulted in me spending more money a broke student doesn't have on the new copy. I know I should have looked better that the description so it is my fault to some degree but I'm really disappointed.

Pretty decent program. It tracks what you're missing on your homework and makes an "adaptive follow-up" that helps re-enforce chapter concepts. Great tools for studying, too.

Textbook and access card great for beginning biology classes, study modules on master biology are really helpful as well!

My access code is not working for the site. It keeps telling me that it isn't valid for the website or course.

My access code worked perfectly good and for a really great price. A++++!

They brought it to me brand new and for a cheap price. It was worth it!

Required book for nephews college. Just what the teacher described
